SUMMARY

CSE (AI & ML) graduate with hands-on experience in Python, SQL, PostgreSQL, Pandas, and Power BI for building end-to-end data analytics and reporting solutions. Developed analytics pipelines on datasets of 284K–500K+ records, including consumer banking fraud analytics and e-commerce sales analysis, delivering actionable business insights through data cleaning, SQL analytics, dashboards, and statistical analysis. Strong foundation in machine learning, data visualization, and quantitative analysis with practical exposure to alpha signal research through WorldQuant BRAIN.

EDUCATION

Keshav Memorial Institute of Technology (KMIT), Hyderabad 2020-2024
B. Tech – CSE(AI&ML)

Sri Chaitanya Jr Kalasala, Chaitanyapuri, Hyderabad 2018-2020
Intermediate – MPC

PROJECTS

E-COMMERCE SALES & CUSTOMER INSIGHTS ANALYSIS

- Analyzed 500K+ e-commerce transaction records using Python (Pandas, NumPy) — removed 144K invalid rows; identified UK contributes 82% of total revenue (£7.3M), November 2011 peak month (£1.16M) driven by Christmas season.
- Identified and validated data quality issues across 500K+ records; performed data transformation and trend analysis on monthly sales patterns; designed Power BI dashboard tracking KPIs — Total Revenue £8.9M, AOV £480, Growth Rate and Regional Performance.
- Exported cleaned data to PostgreSQL and executed analytical queries using Joins, Window Functions, and CTEs for business reporting; delivered insights as stakeholder-facing reporting output.

CREDIT CARD FRAUD ANALYSIS — Consumer Banking Analytics

- Analyzed 284K+ credit card transactions to build an end-to-end fraud analytics and reporting pipeline — simulating Consumer & Community Banking fraud monitoring; loaded data into PostgreSQL using SQLAlchemy.
- Executed 8 SQL analytical queries using CTEs and Window Functions to surface KPIs: fraud rate 0.167%, peak fraud hour 11:00, avg fraud amount £123.87 vs legitimate £88.41 — delivered as stakeholder reporting output.
- Built 5 dashboard visualizations tracking fraud KPIs and risk segments; automated reporting pipeline using SQLAlchemy — enabling cross-functional teams to monitor fraud trends and validate transaction anomalies in real time.

RELEVANT COURSES AND SKILLS

Technical Skills:

- Programming:** Python, SQL (PL/SQL, T/SQL, PostgreSQL), Java; OOP, Data Structures
- Data Analytics & Quantitative Analysis:** Pandas, NumPy, Statistics, Data Cleaning, Data Validation, Exploratory Data Analysis (EDA), Feature Engineering, KPI Reporting, Trend Analysis, Time Series Analysis
- Data Visualization:** Power BI, Looker Studio, Matplotlib, Seaborn, Excel (Pivot Tables, VLOOKUP/XLOOKUP, Charts)
- Machine Learning:** scikit-learn, Logistic Regression, Random Forest, SMOTE, Model Evaluation, Supervised Learning, Classification
- Databases & Tools:** PostgreSQL, BigQuery, SQLAlchemy, Git, GitHub, Jupyter Notebook, VS Code

CERTIFICATIONS & ACHIEVEMENTS

- WorldQuant Challenge — **Silver Level** (2026) | WorldQuant BRAIN Platform — alpha signal research in quantitative finance
